

## Gryphon Garage Doors

A45/A60/M50 (all the older German motors with the all dark grey handsets)

1. Turn the power off to the motor and pull the plug out.
2. Drop the grey cover of the motor down.
3. Inside there, you will see a green circuit board, the fuse is located on this circuit board. The fuse is about 2cm in length, and is held inside a black rectangular casing.

---

You can get the fuses from somewhere like Dick Smith's or Tandy's, otherwise we also have them in our offices. It is a 1.6 AMP, 240 Volt glass fuse. Part # P9648
